

Round 7 — Catalunya GP

Lexus RC F GT3 | Gran Turismo 7 | BOP: ON

Driver: Alex Mansoor

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	FR brakes well — stable platform into T1. V8 engine braking helps.
T3 Renault (blind left)	Front-heavy — pushes on blind downhill entry. Trust the line.
T7 Wurth (long right)	V8 FR loads front-left on sustained right — main weakness.
T9 Campsa (fast right)	Stable at speed but front pushes if entry too fast.
T10 La Caixa (braking)	Strong braking — FR + downhill = predictable stops.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS degrades front-left faster on sustained rights. V8 torque on RS also accelerates rear wear.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

■ Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-1 to -2	Stable FR braking in standing start traffic
Mid-race (clear air)	0 to -1	Neutral as fronts settle
Final stint (worn tyres)	0 to -1	Maintain — 1x wear is forgiving

■ **Avoid heavy rearward bias. FR V8 loads fronts under braking. Too much rear = front lock.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- FR launch requires smooth throttle — too aggressive = wheelspin and lost positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- Stable FR braking platform — exploit this at T1
- Trail brake to rotate — RC F understeers without it
- V8 engine braking adds deceleration. Use it.

T3 RENAULT (BLIND LEFT)

- Blind downhill — front pushes. Reduce entry speed, trust marks.
- Smooth throttle on exit — V8 torque can overwhelm rears.
- Commit to the apex. Hesitation costs more than slight overspeed.

T7 WURTH (LONG RIGHT)

- Front-left under sustained load — RC F's toughest corner
- Smooth arc, patient with throttle. Do not fight understeer.
- V8 torque helps drive out but modulate — rear steps out if aggressive.

T9 CAMPSA (FAST RIGHT)

- Stable at high speed — FR confidence. But front pushes if oversped.
- Smooth entry, carry speed through. Uphill exit helps.
- Do NOT brake mid-corner. Commit or lift before entry.

T10 LA CAIXA (HEAVY BRAKING)

- Strong braking zone — FR + V8 engine braking is effective
- Downhill approach — stable and predictable
- Trail brake to rotate. Good overtaking opportunity.

OVERTAKING ZONES:

- T1 Elf — stable braking, primary overtaking zone
- T10 La Caixa — downhill braking, FR advantage
- Main straight — carry speed from final corner exit

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the window.
2	Overdriving T7 Wurth	Front push = lost time. Front-left suffers.
3	Aggressive exits	V8 torque burns rears on corner exits. Smooth power.
4	Bad standing start	FR launch — smooth clutch, controlled wheelspin.
5	T1 Lap 1 contact	Survive Turn 1. Gain positions through consistency.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Dependable FR V8. Stable braking, predictable handling. Manage front push on sustained rights and V8 torque on exits.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
