

Round 7 — Catalunya GP

Nissan GT-R NISMO GT3 | Gran Turismo 7 | BOP: ON

Driver: Kai Ross

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	Heavy car brakes excellently into T1 — mass = strong deceleration.
T3 Renault (blind left)	Heavy nose pushes on the blind downhill left. Trust marks, reduce speed.
T7 Wurth (long right)	Heavy front + twin-turbo torque loads front-left. Sustained right weakness.
T9 Campsa (fast right)	Heavy car committed at speed but front pushes if entry too fast.
T10 La Caixa (braking)	Excellent braking — mass + downhill = powerful deceleration.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS amplifies front-left wear at T7/T9. Twin-turbo torque also hits rears harder on RS. Monitor both ends.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

■ Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-1 to -2	Heavy nose brakes well — predictable in traffic
Mid-race (clear air)	0 to -1	Balance as fronts settle
Final stint (worn tyres)	0 to -1	Maintain — 1x wear is forgiving

■ **Avoid rearward bias. GT-R's mass loads fronts heavily. Too much rear = unpredictable front lock at T1.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- FR launch requires smooth throttle — too aggressive = wheelspin and lost positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- GT-R excels here — mass gives immense stopping power
- Trail brake to rotate the heavy nose. Essential.
- Primary overtaking zone. Exploit the braking advantage.

T3 RENAULT (BLIND LEFT)

- Heavy nose pushes on blind downhill — reduce entry speed
- Trust reference points. Commit to the apex.
- Twin-turbo torque on exit — modulate to avoid rear snap.

T7 WURTH (LONG RIGHT)

- Front-left under massive sustained load — GT-R's weakest corner
- Do NOT fight the understeer. Smooth arc, patient throttle.
- Twin-turbo lag can cause mid-corner hesitation — anticipate the boost.

T9 CAMPSA (FAST RIGHT)

- Heavy car stable at speed but front pushes if oversped
- Smooth entry, carry speed — uphill exit helps traction
- Turbo boost on exit — smooth application, no spike.

T10 LA CAIXA (HEAVY BRAKING)

- Second-best overtake zone — GT-R stops brilliantly here
- Downhill + mass = exceptional braking performance
- Trail brake, rotate, and drive. Use the twin-turbo traction.

OVERTAKING ZONES:

- T1 Elf — heavy braking zone, GT-R's best weapon
- T10 La Caixa — downhill braking, mass advantage
- Main straight — twin-turbo top speed in the slipstream

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window or lose track position.
2	Overdriving T7 Wurth	Heavy nose + sustained right = front-left death. Patience.
3	Aggressive throttle on exits	Twin-turbo torque shreds rears. Smooth power.
4	Bad standing start	Heavy car needs clean launch. Turbo lag on getaway — anticipate it.
5	T1 Lap 1 contact	Heavy car + contact = severe damage. Survive Turn 1.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Heavy FR with twin-turbo power. Dominant in braking zones. Manage front push on sustained rights and turbo torque on exits.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
