

Round 7 — Catalunya GP

Mazda RX-Vision GT3 Concept | Gran Turismo 7 | BOP: ON

Driver: Jeffery D'ornellas

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	FR brakes well into T1 — stable platform. Rear lightens under heavy braking.
T3 Renault (blind left)	Front-heavy — will push wide on entry if too fast. Trust the line.
T7 Wurth (long right)	Sustained right-hand loads front-left hard — FR weakness on long corners.
T9 Campsa (fast right)	High-speed right loads front heavily — manage entry speed carefully.
T10 La Caixa (braking)	Strong braking zone for FR — stable and predictable. Good overtake spot.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS is faster but front-left will degrade quicker on sustained rights. Monitor grip at T7.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

- Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-1 to -2	Stable fronts — predictable in close racing at standing start
Mid-race (clear air)	0 to -1	Balanced as front tyres settle
Final stint (worn tyres)	0 to -1	Maintain balance — 1x wear keeps tyres consistent

■ **Avoid heavy rearward bias. FR loads fronts under braking. Too much rear = front lock into T1 and La Caixa.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- FR launch requires smooth throttle — too aggressive = wheelspin and lost positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- FR strength — stable, predictable braking platform into T1
- Trail brake to rotate into the right — FR will understeer without it
- Best overtaking zone on the circuit. Use the stable braking.

T3 RENAULT (BLIND LEFT)

- Blind and downhill — commit to the apex. FR tends to push wide here
- Smooth throttle on exit — rear can step out on the camber change
- Trust your reference points. Do NOT lift mid-corner.

T7 WURTH (LONG RIGHT)

- Sustained right loads front-left — FR's most demanding corner
- Smooth entry, patient throttle — do not rush the exit
- 1x wear helps but front-left will still be the first tyre to fade

T9 CAMPSA (FAST RIGHT)

- High-speed commitment corner — FR is stable but front will push if too fast
- Smooth turn-in, carry the speed — do NOT brake mid-corner
- Uphill exit helps traction. Use it.

T10 LA CAIXA (HEAVY BRAKING)

- Second-best overtaking zone — FR brakes well downhill into this corner
- Downhill approach amplifies braking load — stable for FR
- Trail brake to rotate — the car will understeer without it

OVERTAKING ZONES:

- T1 Elf — main straight braking zone, best opportunity every lap
- T10 La Caixa — downhill braking, FR advantage with stable platform
- Main straight slipstream — tow into T1 for a late-braking move

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window or lose track position.
2	Overdriving T7/T9	Front push on sustained right-handers kills front-left. Costs time every lap.
3	Bad standing start	Standard grid, standing start = launch matters. Smooth clutch, no wheelspin.
4	Late pit stop	Pitting too late on first compound loses time to those who pitted at the optimal window.
5	Contact at T1 Lap 1	Standing start = T1 chaos risk. Survive, don't attack. Positions come later.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Stable FR platform. Manage front push on sustained right-handers (T7, T9). Strong in braking zones.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
