

# Round 7 — Catalunya GP

BMW M4 GT Endurance Model | Gran Turismo 7 | BOP: ON

Driver: Bibi Eriksson

Circuit de Barcelona-Catalunya GP (No Chicane)

## RACE SPECIFICATIONS

| Parameter | Value                        | Parameter      | Value                |
|-----------|------------------------------|----------------|----------------------|
| Duration  | 16 laps                      | Grid           | Standard             |
| Tyre Wear | 1x                           | Start          | Standing             |
| Fuel      | 1x                           | Tuning         | Brake Balance only   |
| Weather   | Dry                          | Qualifying     | 10 min — Must use RS |
| Pit Rules | Min 1 pit — Must use RM + RS | Tyre Allowance | RM RS                |

## SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

|                         |                                                                   |
|-------------------------|-------------------------------------------------------------------|
| T1 Elf (heavy braking)  | Long wheelbase brakes well — stable and predictable into T1.      |
| T3 Renault (blind left) | Long wheelbase + front-heavy = pushes on blind downhill entry.    |
| T7 Wurth (long right)   | Front-left loads heavily on the long right — FR weakness here.    |
| T9 Campsa (fast right)  | Stable at speed but front pushes if entry is too fast.            |
| T10 La Caixa (braking)  | Strong braking — long wheelbase gives confidence on the downhill. |

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

## QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

## ■ COMPOUND STRATEGY — Must Use Both RM and RS

| Strategy    | Stint 1       | Stint 2        | Pit Window | Notes                                                                                                                |
|-------------|---------------|----------------|------------|----------------------------------------------------------------------------------------------------------------------|
| A: RS first | RS — Laps 1-8 | RM — Laps 9-16 | Lap 8      | Fast early, safe finish on RM. RS degrades front-left faster on sustained rights. Monitor T7 grip through the stint. |
| B: RM first | RM — Laps 1-8 | RS — Laps 9-16 | Lap 8      | Consistent start, fast finish on RS. Undercut potential.                                                             |

- Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

## ■ FUEL PLAN — 1x Multiplier

| Condition                    | Fuel Map | Reason                                                 |
|------------------------------|----------|--------------------------------------------------------|
| Normal running, clear air    | Map 1    | Maximum power — standard race mode at 1x fuel          |
| Defending position / pushing | Map 1    | Full power always — 1x fuel has no consumption concern |
| Fuel concern (unlikely)      | Map 2    | Slight efficiency gain — only if fuel gauge warns      |

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

## ■ BRAKE BALANCE PLAN

| Phase                    | Setting  | Reason                                     |
|--------------------------|----------|--------------------------------------------|
| Opening laps (traffic)   | -1 to -2 | Stable fronts in standing start traffic    |
| Mid-race (clear air)     | 0 to -1  | Neutral as fronts settle                   |
| Final stint (worn tyres) | 0 to -1  | Maintain — 1x wear keeps things consistent |

■ **Avoid heavy rearward bias. Long-wheelbase FR loads fronts heavily. Too much rear = inconsistent braking.**

## ■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- FR launch requires smooth throttle — too aggressive = wheelspin and lost positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

## ■ KEY DRIVING NOTES — CORNER BY CORNER

### T1 ELF (HEAVY BRAKING)

- Long wheelbase = confident braking. Exploit this at T1.
- Trail brake to rotate — M4 understeers without active rotation
- Best overtaking zone. Use the stable braking platform.

### T3 RENAULT (BLIND LEFT)

- Blind downhill — M4 pushes on entry. Trust reference points, reduce speed.
- Long wheelbase makes rotation slow — plan the line early
- Smooth progressive throttle on exit.

### T7 WURTH (LONG RIGHT)

- Front-left takes sustained load — M4's most challenging corner
- Patient, smooth arc. Do not fight the understeer.
- Progressive throttle — inline-6 helps with smooth power delivery.

### T9 CAMPSA (FAST RIGHT)

- Stable at high speed — long wheelbase advantage
- But front pushes if oversped — discipline entry speed
- Uphill exit helps. Use the momentum.

### T10 LA CAIXA (HEAVY BRAKING)

- Strong downhill braking — long wheelbase is stable here
- Trail brake for rotation — M4 needs help to turn in
- Good overtaking opportunity. Commit to the late brake.

### OVERTAKING ZONES:

- T1 Elf — stable braking, primary overtaking zone
- T10 La Caixa — downhill braking advantage
- Main straight — carry speed from T16 exit

## ■ WHAT WILL LOSE THE RACE

| # | Mistake                    | Consequence                                                          |
|---|----------------------------|----------------------------------------------------------------------|
| 1 | Wrong compound strategy    | Must use both RM and RS. Plan the pit window or lose track position. |
| 2 | Overdriving T7 Wurth       | Front push on long right = lost time. Patience.                      |
| 3 | Bad standing start         | Long wheelbase needs clean launch. Wheelspin = slow getaway.         |
| 4 | Forcing Bus Stop overtakes | Long wheelbase loses in tight chicanes. Pick better battles.         |
| 5 | T1 Lap 1 chaos             | Standing start = T1 pileup risk. Be cautious, gain positions later.  |

## ■ SIMPLE EXECUTION SUMMARY

**QUALIFY** RS -> 2-3 flying laps -> box

**PRE-RACE** Decide: start RS or switch to RM (1 min window)

**LAP 1** STANDING START. Survive T1. No contact.

**LAP 2-7** Long-wheelbase FR. Stable braking, weak on sustained right-handers. Use braking zones for overtakes.

**LAP 8** PIT. Switch compound (RS->RM or RM->RS).

**STINT 2** Push on fresh compound. Exploit tyre advantage.

**FINAL LAPS** Protect position. Manage tyres to the flag.

**WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.**
