

Round 7 — Catalunya GP

Mitsubishi Lancer Evolution Final Edition Gr.3 | Gran Turismo 7 | BOP: ON

Driver: **Diego Shoul**

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	AWD brakes neutrally — stable and predictable into T1.
T3 Renault (blind left)	AWD traction on blind downhill — most stable car through T3.
T7 Wurth (long right)	AWD distributes load across all four tyres — less wear per tyre but ALL wear.
T9 Campsa (fast right)	AWD traction at speed — stable and committed. Exploit the advantage.
T10 La Caixa (braking)	Balanced braking — AWD is predictable on the downhill approach.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS on AWD wears all four tyres. Front degradation is the surprise — monitor T7 front-left grip.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

■ Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-1 to -2	Slight front bias for predictability in traffic
Mid-race (clear air)	0 to -1	Near-neutral — AWD distributes well
Final stint (worn tyres)	0	Neutral — all four tyres wear evenly on AWD

■ **AWD braking is naturally balanced. Avoid extremes. Too forward = front lock. Too rearward = unexpected rotation from a stable car.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- AWD traction = HUGE advantage off the line. Exploit it. Clean launch gains 1-2 positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- AWD brakes neutrally — stable and predictable
- Trail brake to rotate — AWD understeers without active rotation
- Good overtaking corner. AWD stability helps in close racing.

T3 RENAULT (BLIND LEFT)

- AWD = most planted car through blind T3. Commit with confidence.
- Traction on exit is exceptional — more aggressive throttle than RWD
- AWD stability on the downhill makes T3 less scary than for any rival.

T7 WURTH (LONG RIGHT)

- AWD advantage — all four tyres share the lateral load
- Can carry competitive entry speed — AWD distributes the work
- But ALL tyres wear. Monitor fronts as well as rears.

T9 CAMPSA (FAST RIGHT)

- AWD traction = stable and committed at high speed
- More confidence than RWD rivals through Campsa
- Exploit the stability. Push harder here than rivals can.

T10 LA CAIXA (HEAVY BRAKING)

- Balanced braking on the downhill — predictable and safe
- Trail brake to rotate — AWD needs help to turn in
- Good overtaking zone. AWD stability is an asset.

OVERTAKING ZONES:

- T1 Elf — AWD stability makes close racing safer
- T9 Campsa — AWD traction carries more speed than rivals
- Standing start — AWD traction advantage off the line

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window.
2	Ignoring front tyre wear	AWD wears ALL tyres. Monitor fronts — they degrade too.
3	Underusing traction advantage	AWD launches better. Exploit standing start and exits.
4	Overconfidence	AWD is stable but not invincible. Catalunya still demands respect.
5	Poor pit timing	All four tyres degrade — pit when ANY corner feels off.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 AWD = most stable platform. Advantage at standing start, T3, T9. But ALL tyres wear.
Monitor everything, not just rears.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
