

Round 7 — Catalunya GP

Dodge Viper GTS-R GT3 | Gran Turismo 7 | BOP: ON

Driver: Sean Corbin

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	Heavy car stops well — stable platform. Mass carries into the corner though.
T3 Renault (blind left)	Heavy nose pushes on the blind downhill left. Discipline entry speed.
T7 Wurth (long right)	V10 torque and mass load front-left heavily — sustained right-hand weakness.
T9 Campsa (fast right)	Heavy car committed at speed but front pushes if entry is too fast.
T10 La Caixa (braking)	Excellent braking — heavy car + downhill = strong deceleration.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS on the Viper — front-left degrades faster. Monitor T7 grip. V10 torque amplifies rear wear on exits.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

- Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-1 to -2	Heavy nose brakes well — keep predictable in traffic
Mid-race (clear air)	0 to -1	Balance as fronts settle
Final stint (worn tyres)	0 to -1	Maintain — 1x wear keeps things stable

- **Avoid heavy rearward bias. Viper's mass loads fronts enormously under braking. Too much rear = front lock at T1.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- FR launch requires smooth throttle — too aggressive = wheelspin and lost positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- Viper excels here — mass gives powerful braking
- Trail brake to rotate the heavy nose into the right-hander
- Primary overtaking zone. Use the car's braking strength.

T3 RENAULT (BLIND LEFT)

- Heavy car + blind corner + downhill = commit or lose time
- Reduce entry speed slightly — nose will push. Trust reference points
- V10 torque helps on exit but modulate — rear can step out

T7 WURTH (LONG RIGHT)

- Front-left takes massive load — V10 torque doesn't help here
- Patience is key. Smooth arc, progressive throttle through the long right
- This corner costs lap time if you fight the understeer

T9 CAMPSA (FAST RIGHT)

- Commit or lift — no half-measures. Heavy car is stable but unforgiving
- Entry speed management critical — front will push if oversped
- Uphill exit helps. Use the V10 torque to drive out.

T10 LA CAIXA (HEAVY BRAKING)

- Second-best overtaking zone — Viper dominates braking here
- Downhill + mass = exceptional stopping power
- Trail brake to rotate. Don't waste the braking advantage.

OVERTAKING ZONES:

- T1 Elf — heavy braking zone, Viper's best weapon
- T10 La Caixa — downhill braking, mass advantage
- Main straight — V10 top speed in the slipstream

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window or lose track position.
2	Overdriving T7 Wurth	V10 torque + sustained right = front-left death. Patience.
3	Bad standing start	Heavy car needs clean launch. Wheelspin = lost positions.
4	T1 Lap 1 aggression	Heavy car + contact = severe damage. Survive lap 1.
5	Late pit stop	Pitting too late on first compound loses track position to optimal strategies.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Heavy FR with V10 power. Dominant in braking zones. Weak on sustained right-handers. Discipline at T7 and T9.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
