

Round 7 — Catalunya GP

Renault R.S.01 GT3 | Gran Turismo 7 | BOP: ON

Driver: **Cameron Browne**

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	MR rotates sharply under braking — front-bias needed or rear snaps.
T3 Renault (blind left)	MR turns in well but rear can snap on the blind downhill entry.
T7 Wurth (long right)	Right-rear loads under sustained lateral — classic MR weakness.
T9 Campsa (fast right)	Right-rear suffers at high speed sustained load.
T10 La Caixa (braking)	MR rotation advantage under braking — good overtake spot.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS amplifies right-rear wear at T7/T9. Be extra careful with throttle on RS stints.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

■ Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-2 to -3	Front-biased for stable stops in standing start traffic
Mid-race (clear air)	-1 to -2	Slightly less front as rears settle
Final stint (worn tyres)	-1 to -2	Maintain front bias — MR always rotates

■ **NEVER go positive. MR rotates under braking. Positive bias = snap oversteer into T1 or La Caixa.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- MR traction is good. Clean launch, protect position into T1. Use rotation at T1.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- MR rotation helps turn-in — trail brake into T1 effectively
- Keep brake balance front-biased — rear snaps if overloaded
- Good overtaking corner for MR. Use the rotation.

T3 RENAULT (BLIND LEFT)

- Blind downhill — MR turns in well but rear can step out on camber change
- Commit to apex. Smooth throttle on exit — progressive power only.
- Do NOT lift mid-corner — MR oversteer is sharp here.

T7 WURTH (LONG RIGHT)

- Right-rear loads under sustained lateral — R.S.01 weakness
- Smooth arc, patient throttle — protect the right-rear
- 1x wear helps but still the most demanding corner for rears

T9 CAMPSA (FAST RIGHT)

- High-speed right — right-rear loads hard. Smooth entry.
- Do NOT lift mid-corner — MR oversteer at this speed = crash
- Progressive throttle uphill on exit.

T10 LA CAIXA (HEAVY BRAKING)

- MR rotation advantage — downhill braking + turn-in is sharp
- Front-biased balance. Late brake confidently.
- Second-best overtake zone. Commit.

OVERTAKING ZONES:

- T1 Elf — MR rotation advantage on trail braking
- T10 La Caixa — downhill, MR turns in sharply
- Main straight slipstream into T1

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window.
2	Positive brake balance	MR + positive = snap oversteer. Race over.
3	Overdriving T7/T9	Right-rear degrades on sustained rights. Patience.
4	Bad standing start	MR traction is good — clean launch gains positions.
5	T1 Lap 1 contact	Standing start chaos. Survive T1, attack from T3.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Sharp MR with good rotation. Protect right-rear on sustained rights. Use braking rotation for overtakes.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
