

Round 7 — Catalunya GP

Genesis X GR3 | Gran Turismo 7 | BOP: ON

Driver: Neal Gonsalves

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	FR brakes well — stable platform into the heavy braking zone.
T3 Renault (blind left)	Front-heavy — pushes on blind downhill. Discipline entry speed.
T7 Wurth (long right)	Front-left loads on sustained right — FR main weakness.
T9 Campsa (fast right)	Stable at speed but front pushes if entry too fast.
T10 La Caixa (braking)	Strong braking — FR stable on the downhill approach.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS degrades front-left faster on sustained rights. Monitor grip at T7 mid-stint.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

■ Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-1 to -2	Stable fronts for predictable stops in traffic
Mid-race (clear air)	0 to -1	Balance as front tyres settle
Final stint (worn tyres)	0 to -1	Maintain — 1x wear keeps things consistent

- **Avoid heavy rearward bias. FR loads fronts under braking. Too much rear = front lock-up into hairpins.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- FR launch requires smooth throttle — too aggressive = wheelspin and lost positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- Stable FR braking platform — exploit this at T1
- Trail brake to rotate — Genesis understeers without it
- Primary overtaking zone. Use the stable braking.

T3 RENAULT (BLIND LEFT)

- Blind downhill — front pushes. Trust marks, reduce speed.
- Smooth throttle on exit — rear can step out if aggressive
- Commit to apex. Hesitation costs time.

T7 WURTH (LONG RIGHT)

- Front-left under sustained load — Genesis' toughest corner
- Patient arc, smooth throttle. Do not fight the understeer.
- 1x wear helps but front-left is still the first tyre to feel it.

T9 CAMPSA (FAST RIGHT)

- Stable at high speed but front pushes if oversped
- Smooth entry, carry speed. Uphill exit helps traction.
- Do NOT brake mid-corner. Commit or lift before entry.

T10 LA CAIXA (HEAVY BRAKING)

- Strong downhill braking — FR is stable here
- Trail brake for rotation. Good overtaking opportunity.
- Commit to the late brake. FR stops well.

OVERTAKING ZONES:

- T1 Elf — stable braking, primary zone
- T10 La Caixa — downhill braking advantage
- Main straight — carry speed from final corner exit

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window.
2	Overdriving T7	Front push = lost time and front-left wear. Patience.
3	Bad standing start	FR needs clean launch. Smooth, no wheelspin.
4	Aggressive exits	Burns rears on corner exits. Smooth throttle.
5	T1 Lap 1 contact	Survive Turn 1. Consistency wins the race.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Clean FR platform. Stable braking, predictable handling. Manage front push on sustained rights. Consistency wins.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
