

# Round 7 — Catalunya GP

Porsche 911 RSR (2017) | Gran Turismo 7 | BOP: ON

Driver: Mario Winter

Circuit de Barcelona-Catalunya GP (No Chicane)

## RACE SPECIFICATIONS

| Parameter | Value                        | Parameter      | Value                |
|-----------|------------------------------|----------------|----------------------|
| Duration  | 16 laps                      | Grid           | Standard             |
| Tyre Wear | 1x                           | Start          | Standing             |
| Fuel      | 1x                           | Tuning         | Brake Balance only   |
| Weather   | Dry                          | Qualifying     | 10 min — Must use RS |
| Pit Rules | Min 1 pit — Must use RM + RS | Tyre Allowance | RM RS                |

## SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

|                         |                                                                        |
|-------------------------|------------------------------------------------------------------------|
| T1 Elf (heavy braking)  | RR pendulum under heavy braking — snappy. HEAVY front bias needed.     |
| T3 Renault (blind left) | RR turns naturally but lift-off oversteer on blind downhill is lethal. |
| T7 Wurth (long right)   | Rear weight = massive sustained grip. RSR STRENGTH at Catalunya.       |
| T9 Campsa (fast right)  | Rear weight = planted at speed. RSR excels here.                       |
| T10 La Caixa (braking)  | RR pendulum on downhill braking — dangerous. Front bias essential.     |

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

## QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

## ■ COMPOUND STRATEGY — Must Use Both RM and RS

| Strategy    | Stint 1       | Stint 2        | Pit Window | Notes                                                                                                                          |
|-------------|---------------|----------------|------------|--------------------------------------------------------------------------------------------------------------------------------|
| A: RS first | RS — Laps 1-8 | RM — Laps 9-16 | Lap 8      | Fast early, safe finish on RM. RS on the RSR — rears wear but manageable at 1x. Lift-off oversteer more pronounced on worn RS. |
| B: RM first | RM — Laps 1-8 | RS — Laps 9-16 | Lap 8      | Consistent start, fast finish on RS. Undercut potential.                                                                       |

■ Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

*At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.*

## ■ FUEL PLAN — 1x Multiplier

| Condition                    | Fuel Map | Reason                                                 |
|------------------------------|----------|--------------------------------------------------------|
| Normal running, clear air    | Map 1    | Maximum power — standard race mode at 1x fuel          |
| Defending position / pushing | Map 1    | Full power always — 1x fuel has no consumption concern |
| Fuel concern (unlikely)      | Map 2    | Slight efficiency gain — only if fuel gauge warns      |

*At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.*

## ■ BRAKE BALANCE PLAN

| Phase                    | Setting  | Reason                                                |
|--------------------------|----------|-------------------------------------------------------|
| Opening laps (traffic)   | -3 to -4 | Maximum front bias — RR pendulum in traffic is lethal |
| Mid-race (clear air)     | -2 to -3 | Still heavily front-biased — RR always rotates        |
| Final stint (worn tyres) | -1 to -2 | Less front but STILL negative — never neutral         |

■ **NEVER go positive. RR pendulum = guaranteed snap oversteer. Heavy front bias at ALL times.**

## ■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- RR traction is excellent BUT pendulum risk on T1 braking. Launch clean, brake EARLY into T1.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

## ■ KEY DRIVING NOTES — CORNER BY CORNER

### T1 ELF (HEAVY BRAKING)

- DANGER — heavy braking + pendulum. Smooth progressive braking.
- Heavy front bias. No stabs. No late braking heroics.
- RSR rotates naturally — less trail brake than FR/MR cars.

### T3 RENAULT (BLIND LEFT)

- NEVER lift mid-corner. Lift-off oversteer on blind downhill = crash.
- RR turns in naturally — less input needed. Smooth and committed.
- Any hesitation triggers the pendulum. Full commitment.

### T7 WURTH (LONG RIGHT)

- RSR STRENGTH — rear weight gives incredible sustained lateral grip
- Carry more speed than FR/MR rivals through the long right
- NEVER lift. Throttle constant. Lift-off oversteer kills at any speed.

### T9 CAMPSA (FAST RIGHT)

- RSR STRENGTH — planted at high speed through Campsa
- More speed than any rival here. Exploit the rear weight.
- NEVER lift. Smooth throttle throughout. Commitment required.

### T10 LA CAIXA (HEAVY BRAKING)

- MOST dangerous corner — downhill + pendulum
- Conservative braking. Front bias. No heroics.
- Defend here, attack at T1 or use traction on straights.

### OVERTAKING ZONES:

- T1 Elf — manage pendulum, smooth braking
- Traction advantage — out-drag rivals on every straight
- T7/T9 — carry more speed through sustained rights than anyone

## ■ WHAT WILL LOSE THE RACE

| # | Mistake                 | Consequence                                      |
|---|-------------------------|--------------------------------------------------|
| 1 | Wrong compound strategy | Must use both RM and RS. Plan the pit window.    |
| 2 | Positive brake balance  | RR + positive = violent snap. Crash guaranteed.  |
| 3 | Lifting mid-corner      | Lift-off oversteer at T3, T7, T9. NEVER lift.    |
| 4 | Late braking La Caixa   | Downhill + pendulum = disaster. Be conservative. |
| 5 | T1 Lap 1 aggression     | RR pendulum + standing start chaos. Survive T1.  |

## ■ SIMPLE EXECUTION SUMMARY

**QUALIFY** RS -> 2-3 flying laps -> box

**PRE-RACE** Decide: start RS or switch to RM (1 min window)

**LAP 1** STANDING START. Survive T1. No contact.

**LAP 2-7** RR gives exceptional traction and sustained grip. Pendulum at T1/La Caixa demands front-biased braking. NEVER lift mid-corner.

**LAP 8** PIT. Switch compound (RS->RM or RM->RS).

**STINT 2** Push on fresh compound. Exploit tyre advantage.

**FINAL LAPS** Protect position. Manage tyres to the flag.

**WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.**
