

Round 7 — Catalunya GP

Porsche 911 GT3 R (992) '22 | Gran Turismo 7 | BOP: ON

Driver: **Stephen Shoul**

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	RR pendulum under heavy braking — very snappy. HEAVY front bias essential.
T3 Renault (blind left)	RR turns in naturally — but lift-off oversteer on blind downhill is lethal.
T7 Wurth (long right)	Rear weight = incredible sustained grip — this is a 911 STRENGTH at Catalunya.
T9 Campsa (fast right)	Rear weight = planted at high speed. 911 excels at Campsa.
T10 La Caixa (braking)	RR pendulum on downhill braking — VERY dangerous. Maximum front bias.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS on the 911 — rears wear faster but still manageable at 1x. Main risk is lift-off oversteer on worn RS.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

- Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-3 to -4	Maximum front bias — RR pendulum in traffic is lethal
Mid-race (clear air)	-2 to -3	Still heavily front-biased — RR always wants to rotate
Final stint (worn tyres)	-1 to -2	Less front but STILL negative — never neutral on the 911

■ **NEVER go positive. NEVER go neutral. RR pendulum = snap oversteer at T1 and La Caixa.**
Heavy front bias ALWAYS.

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- RR traction is excellent BUT pendulum risk on T1 braking. Launch clean, brake EARLY into T1.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- DANGER ZONE for the 911 — heavy braking + pendulum
- Heavy front bias. Smooth progressive braking — no stabs.
- Less trail braking than MR/FR — 911 rotates on its own.

T3 RENAULT (BLIND LEFT)

- Blind downhill — NEVER lift mid-corner. Lift-off oversteer = crash.
- RR turns in naturally — less steering input needed
- Commit fully. Any hesitation triggers the pendulum.

T7 WURTH (LONG RIGHT)

- 911 STRENGTH — rear weight = incredible sustained lateral grip
- Can carry more speed than any FR/MR through the long right
- NEVER lift though. Throttle constant. Lift-off oversteer kills.

T9 CAMPSA (FAST RIGHT)

- 911 STRENGTH — rear weight planted at high speed
- Flat with confidence on fresh tyres. More speed than any rival here.
- NEVER lift. Smooth throttle. The 911 rewards commitment at Campsa.

T10 LA CAIXA (HEAVY BRAKING)

- MOST dangerous corner — downhill + heavy braking + pendulum
- Heavy front bias. Smooth progressive braking. NO late braking heroics.
- Easier to overtake at T1. Be defensive here, attack elsewhere.

OVERTAKING ZONES:

- T1 Elf — but manage the pendulum. Smooth braking only.
- Exit speed advantage — 911 traction out-drags rivals on every straight
- T7/T9 — carry more speed than rivals through sustained rights

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window.
2	Positive brake balance	RR pendulum + positive = violent snap. Guaranteed crash.
3	Lifting mid-corner	Lift-off oversteer is instant at T3, T7, T9. NEVER lift.
4	Late braking at La Caixa	Downhill + pendulum = lock-up or spin. Be conservative here.
5	T1 Lap 1 aggression	Standing start + RR pendulum. Survive T1. Exploit traction later.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 RR gives incredible traction and sustained grip at T7/T9. But pendulum at T1/La Caixa demands front-biased braking ALWAYS. NEVER lift mid-corner.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
