

Round 7 — Catalunya GP

Toyota GR Supra Racing Concept | Gran Turismo 7 | BOP: ON

Driver: Ali Fuller

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	FR brakes well — turbo engine braking helps deceleration into T1.
T3 Renault (blind left)	Front-heavy — pushes on blind downhill. Turbo lag mid-corner adds unpredictability.
T7 Wurth (long right)	Front-left loads on sustained right — turbo boost mid-corner can unsettle.
T9 Campsa (fast right)	Stable at speed but turbo boost can cause snap on exit.
T10 La Caixa (braking)	Good braking zone — FR stable on the downhill approach.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS + turbo = amplified rear wear on exits. Front-left also degrades faster on sustained rights.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

- Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-1 to -2	Stable fronts in standing start traffic
Mid-race (clear air)	0 to -1	Balance as fronts settle
Final stint (worn tyres)	0 to -1	Maintain — turbo needs consistent balance

- **Avoid rearward bias. FR turbo loads fronts under braking. Turbo power delivery can unsettle rear if bias is wrong.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- FR launch requires smooth throttle — too aggressive = wheelspin and lost positions.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- FR brakes well with turbo engine braking — exploit at T1
- Trail brake to rotate — Supra understeers without it
- Turbo lag on exit — anticipate the power delivery out of T1.

T3 RENAULT (BLIND LEFT)

- Blind downhill — front pushes. Trust marks, commit to apex.
- Turbo lag mid-corner adds uncertainty — stay smooth
- Boost spike on exit — modulate throttle or rear snaps.

T7 WURTH (LONG RIGHT)

- Front-left loads under sustained right — Supra's tough corner
- Turbo boost mid-corner can unsettle — smooth throttle essential
- Patient arc. Let the boost build naturally through the corner.

T9 CAMPSA (FAST RIGHT)

- High-speed right — stable but turbo boost can cause snap
- Smooth entry, carry speed. Anticipate boost timing.
- Uphill exit — turbo helps here. Use the traction.

T10 LA CAIXA (HEAVY BRAKING)

- Good downhill braking zone — FR is stable here
- Trail brake for rotation. Turbo lag on exit — be ready.
- Second-best overtaking zone. Commit to the late brake.

OVERTAKING ZONES:

- T1 Elf — turbo engine braking + FR stability for late braking
- T10 La Caixa — downhill braking, stable platform
- Main straight — turbo top speed in the slipstream

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window.
2	Fighting turbo lag	Boost spikes on exits burn rears. Anticipate the power.
3	Overdriving T7	Front push + turbo instability = lost time every lap.
4	Bad standing start	Turbo lag on launch — anticipate it. Smooth getaway.
5	T1 Lap 1 chaos	Standing start = T1 pileup risk. Survive first.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Turbo FR – smooth power but boost spikes demand anticipation. Stable braking, manage turbo lag on exits.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
