

Round 7 — Catalunya GP

Audi R8 LMS Evo '19 | Gran Turismo 7 | BOP: ON

Driver: Luca Ascarelli

Circuit de Barcelona-Catalunya GP (No Chicane)

RACE SPECIFICATIONS

Parameter	Value	Parameter	Value
Duration	16 laps	Grid	Standard
Tyre Wear	1x	Start	Standing
Fuel	1x	Tuning	Brake Balance only
Weather	Dry	Qualifying	10 min — Must use RS
Pit Rules	Min 1 pit — Must use RM + RS	Tyre Allowance	RM RS

SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

T1 Elf (heavy braking)	MR rotates under braking — snappy if brake balance is wrong. Front-bias needed.
T3 Renault (blind left)	MR turns in well — but rear can snap on the blind downhill if aggressive.
T7 Wurth (long right)	Sustained load kills right-rear progressively — MR weakness on long corners.
T9 Campsa (fast right)	MR loads rear well at speed — but right-rear suffers under sustained lateral load.
T10 La Caixa (braking)	MR rotation under braking — good for overtakes but needs front-biased balance.

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

■ COMPOUND STRATEGY — Must Use Both RM and RS

Strategy	Stint 1	Stint 2	Pit Window	Notes
A: RS first	RS — Laps 1-8	RM — Laps 9-16	Lap 8	Fast early, safe finish on RM. RS amplifies right-rear wear at T7 and T9. Monitor grip carefully mid-stint.
B: RM first	RM — Laps 1-8	RS — Laps 9-16	Lap 8	Consistent start, fast finish on RS. Undercut potential.

■ Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.

■ FUEL PLAN — 1x Multiplier

Condition	Fuel Map	Reason
Normal running, clear air	Map 1	Maximum power — standard race mode at 1x fuel
Defending position / pushing	Map 1	Full power always — 1x fuel has no consumption concern
Fuel concern (unlikely)	Map 2	Slight efficiency gain — only if fuel gauge warns

At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.

■ BRAKE BALANCE PLAN

Phase	Setting	Reason
Opening laps (traffic)	-2 to -3	Front-biased for stable stops in standing start traffic
Mid-race (clear air)	-1 to -2	Slightly less front as rears settle
Final stint (worn tyres)	-1 to -2	Maintain front bias — MR always wants to rotate

■ **NEVER go positive. MR rotates under braking naturally. Positive bias = snap oversteer at T1 or La Caixa.**

■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- MR traction is good. Clean launch, protect position into T1. Use rotation at T1.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

■ KEY DRIVING NOTES — CORNER BY CORNER

T1 ELF (HEAVY BRAKING)

- MR rotation advantage — turns in sharply under trail braking
- Keep brake balance front-biased — rear will snap if overloaded
- Good overtaking corner for MR — use the rotation to your advantage

T3 RENAULT (BLIND LEFT)

- Blind and downhill — MR turns in well but rear can snap on camber change
- Commit to the apex — trust your marks. Smooth throttle on exit.
- Rear can step wide on exit if aggressive — progressive power only.

T7 WURTH (LONG RIGHT)

- Right-rear suffers under sustained lateral load — classic MR weakness
- Smooth arc, patient throttle — protect the right-rear through the long right
- 1x wear helps but this is still the most demanding corner for rear tyres

T9 CAMPSA (FAST RIGHT)

- High-speed commitment — MR is planted but right-rear loads hard
- Smooth turn-in, carry speed — do NOT lift mid-corner (oversteer risk)
- Progressive throttle on uphill exit — do not spike the power

T10 LA CAIXA (HEAVY BRAKING)

- MR rotation helps — good overtaking corner with trail braking
- Downhill braking — keep front-biased balance for stability
- Commit to the late brake. MR stops well with proper balance.

OVERTAKING ZONES:

- T1 Elf — MR rotation advantage under trail braking
- T10 La Caixa — downhill, MR turns in sharply
- Main straight slipstream into T1 — primary opportunity

■ WHAT WILL LOSE THE RACE

#	Mistake	Consequence
1	Wrong compound strategy	Must use both RM and RS. Plan the pit window or lose track position.
2	Positive brake balance	MR + positive bias = snap oversteer at T1 or La Caixa. Race over.
3	Overdriving T7/T9	Right-rear degrades on sustained rights. Patience saves the stint.
4	Bad standing start	MR traction is good — use it. Clean launch gains positions.
5	T1 Lap 1 contact	Standing start chaos at T1. Survive, position yourself for T3.

■ SIMPLE EXECUTION SUMMARY

QUALIFY RS -> 2-3 flying laps -> box

PRE-RACE Decide: start RS or switch to RM (1 min window)

LAP 1 STANDING START. Survive T1. No contact.

LAP 2-7 Sharp MR with good rotation. Protect right-rear on sustained right-handers. Use MR braking advantage for overtakes.

LAP 8 PIT. Switch compound (RS->RM or RM->RS).

STINT 2 Push on fresh compound. Exploit tyre advantage.

FINAL LAPS Protect position. Manage tyres to the flag.

WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.
