

# Round 7 — Catalunya GP

Ferrari 296 GT3 | Gran Turismo 7 | BOP: ON

Driver: **Luka Bruschi**

Circuit de Barcelona-Catalunya GP (No Chicane)

## RACE SPECIFICATIONS

| Parameter | Value                        | Parameter      | Value                |
|-----------|------------------------------|----------------|----------------------|
| Duration  | 16 laps                      | Grid           | Standard             |
| Tyre Wear | 1x                           | Start          | Standing             |
| Fuel      | 1x                           | Tuning         | Brake Balance only   |
| Weather   | Dry                          | Qualifying     | 10 min — Must use RS |
| Pit Rules | Min 1 pit — Must use RM + RS | Tyre Allowance | RM RS                |

## SITUATION ASSESSMENT

Critical focus areas at Catalunya on this car:

|                         |                                                                           |
|-------------------------|---------------------------------------------------------------------------|
| T1 Elf (heavy braking)  | MR rotates sharply under braking — hybrid torque fill on exit is instant. |
| T3 Renault (blind left) | MR turns in well — but hybrid torque snap risk on exit is extreme.        |
| T7 Wurth (long right)   | Right-rear loads under sustained lateral — hybrid torque amplifies wear.  |
| T9 Campsa (fast right)  | Right-rear suffers. Hybrid torque at speed makes this corner critical.    |
| T10 La Caixa (braking)  | MR + hybrid regen braking = exceptional deceleration.                     |

Standard grid, standing start = qualifying position matters. Good launch is critical. Survive T1 Lap 1.

## QUALIFYING PLAN — 10 min | Mandatory RS

- Out-lap: build tyre temps gently — do NOT push through T3 cold
- Flying lap 1: clean banker. No heroics. Get a time on the board.
- Flying lap 2: PUSH — RS peaks on lap 2 at 1x wear
- Flying lap 3: small improvement possible at 1x — commit if tyres feel good
- Final sector: T9 Campsa flat if confident. T10 La Caixa precise — don't ruin the lap.

You have 1 minute before race start to change compound. Decision: start on RS or switch to RM.

## ■ COMPOUND STRATEGY — Must Use Both RM and RS

| Strategy    | Stint 1       | Stint 2        | Pit Window | Notes                                                                                                                           |
|-------------|---------------|----------------|------------|---------------------------------------------------------------------------------------------------------------------------------|
| A: RS first | RS — Laps 1-8 | RM — Laps 9-16 | Lap 8      | Fast early, safe finish on RM. RS on the 296 = shortest tyre life of any car. Hybrid torque eats RS rears. Keep RS stint short. |
| B: RM first | RM — Laps 1-8 | RS — Laps 9-16 | Lap 8      | Consistent start, fast finish on RS. Undercut potential.                                                                        |

- Both strategies are viable at 1x wear. Key factor: do you want track position early (RS first) or late-race speed (RM first)?

*At 1x wear, RS lasts the full 8 laps comfortably. Strategy is about track position, not tyre survival.*

## ■ FUEL PLAN — 1x Multiplier

| Condition                    | Fuel Map | Reason                                                 |
|------------------------------|----------|--------------------------------------------------------|
| Normal running, clear air    | Map 1    | Maximum power — standard race mode at 1x fuel          |
| Defending position / pushing | Map 1    | Full power always — 1x fuel has no consumption concern |
| Fuel concern (unlikely)      | Map 2    | Slight efficiency gain — only if fuel gauge warns      |

*At 1x fuel over 16 laps, fuel is NOT a concern. Run Map 1 the entire race. Do not overthink fuel — focus on tyres and track position.*

## ■ BRAKE BALANCE PLAN

| Phase                    | Setting  | Reason                                                        |
|--------------------------|----------|---------------------------------------------------------------|
| Opening laps (traffic)   | -2 to -3 | Front-biased — hybrid snap in traffic is race-ending          |
| Mid-race (clear air)     | -1 to -2 | Slightly less front as rears settle                           |
| Final stint (worn tyres) | -1 to -2 | Maintain front bias — hybrid torque never stops being instant |

■ **NEVER go positive. MR + hybrid torque = instant snap oversteer. Front-biased at ALL times.**

## ■ STANDING START PROTOCOL

- Standard grid — qualifying position is your starting position. Qualify well.
- MR traction is good. Clean launch, protect position into T1. Use rotation at T1.
- T1 Elf on Lap 1 is a contact magnet. Be cautious. Positions are won over 16 laps, not Turn 1.
- If you lose a position at the start, T1 and La Caixa give you opportunities every lap.

## ■ KEY DRIVING NOTES — CORNER BY CORNER

### T1 ELF (HEAVY BRAKING)

- MR + hybrid regen = massive braking power. Exploit this.
- Rotation is sharp — less trail brake needed than FR cars
- Hybrid torque on exit is INSTANT — smooth throttle application.

### T3 RENAULT (BLIND LEFT)

- MR turns in well on blind downhill — trust marks
- Hybrid torque on exit is the danger — progressive throttle ONLY
- Any aggression on exit = rear snap. 296 is the sharpest car here.

### T7 WURTH (LONG RIGHT)

- Right-rear under massive load — hybrid torque amplifies wear
- Most demanding corner for the 296. Smooth, patient, disciplined.
- Do NOT rush the throttle through the long right. Protect the right-rear.

### T9 CAMPSA (FAST RIGHT)

- High-speed right — right-rear loads hard. Hybrid torque makes it worse.
- Smooth entry, committed. Do NOT lift mid-corner — hybrid regen = snap.
- Progressive throttle on uphill exit. Do not spike the power.

### T10 LA CAIXA (HEAVY BRAKING)

- MR + hybrid regen = best braking performance on the grid
- Downhill approach amplifies the advantage further
- Primary overtaking weapon. Use it aggressively.

### OVERTAKING ZONES:

- T1 Elf — hybrid regen braking is a massive weapon
- T10 La Caixa — best braking on the grid, downhill amplifies it
- Main straight — hybrid fill gives excellent drive out of T16

## ■ WHAT WILL LOSE THE RACE

| # | Mistake                 | Consequence                                                          |
|---|-------------------------|----------------------------------------------------------------------|
| 1 | Wrong compound strategy | Must use both RM and RS. Plan the pit window.                        |
| 2 | Aggressive exits        | Hybrid torque is instant. Rears die faster than any car on the grid. |
| 3 | Positive brake balance  | MR + hybrid + positive = violent snap. Guaranteed incident.          |
| 4 | Overdriving T7/T9       | Right-rear is everything. Patience at sustained rights is mandatory. |
| 5 | T1 Lap 1 aggression     | 296 is sharp. Contact at T1 = damage. Survive, use braking later.    |

## ■ SIMPLE EXECUTION SUMMARY

**QUALIFY** RS -> 2-3 flying laps -> box

**PRE-RACE** Decide: start RS or switch to RM (1 min window)

**LAP 1** STANDING START. Survive T1. No contact.

**LAP 2-7** Fastest MR hybrid – incredible braking and traction. But hybrid torque demands extreme throttle discipline. Right-rear is everything.

**LAP 8** PIT. Switch compound (RS->RM or RM->RS).

**STINT 2** Push on fresh compound. Exploit tyre advantage.

**FINAL LAPS** Protect position. Manage tyres to the flag.

**WIN ON CONSISTENCY. FUEL MAP 1 ALL RACE.**
